Price: \$109.00

P/N # Wk16930

Flat Table Cups

Better Vacuum Cups, Inc. manufactures a full line of flat table cups for such machinery as Biesse Rovers, Anderson, CR Onsrud, CMS, Komo, Routech, Weeke, Northwood, Multi-cam, Thermwood and many more... If your table does not have a grid, a spoil board is easily made to raise material for horizontal boring, bullnosing and more. We carry three sizes in height including 29mm, 48mm, and 100mm for aggregate work. Standard cups are 135mm x 145mm and come as small as 50mmx 135mm with the possibility of holding material as small as 38mm.

Why the BVC cups are BETTER:

- All BVC vacuum cups are made out of a solid rubber material, therefore eliminating the need for the foam gasket material.*
- Due to the rubber material, tools are not damaged when the cups are accidentally routed into.
- BVC cups are extremely durable and can be dropped with no damage to the cup, table or materials
- All BVC flat table cups come equipped with a check valve, allowing you to leave the cups on the grid table without any vacuum leakage.
- Prices start as low as \$129.00 and we offer a bulk discount.

*Some customers report using the gasket material with unsanded solid or warped wood.

Solid Surface Cups

Price: \$275.00

P/N: SS168

Patent Pending 2007

Better Vacuum Cups, Inc. is pleased to announce the newest cup to our line. This cup is used primarily in the granite and glass industry. This is a double sided vacuum cup with replaceable rubber tops. When routed into, just replace the rubber tops with no down time and no damage to the expensive diamond tool. When accidentally dropped there is no damage to the cup, table or materials. With non metallic materials used, weight is significantly less than others. No more fumbling around with foam gasket. BVC cups require no gasket. Check out these cups when looking into cups for your stone machines such as Intermac, Northwood, Matrix, and many more...

Customer Testimonials:

My company had been plagued with hold down issues ever since we purchased our Busellato Machine Centers. Creative, though time consuming means, we were often employed in our efforts to machine typical elements of production. I was quite impressed with a display of Better Vacuum Cup's product line at a show in Las Vegas and decided to take a chance. Our results have been nothing but positive. From customer service, to the performance of the products themselves, we have been extremely happy. We are now able to vacuum parts down that we would have never dreamt possible prior to. Setup time has also been greatly reduced, as there is no longer need to add and remove clamps. The cups perform, and we are very happy with our decision.

—J.R. Neilson

Thanks for getting the cups out for our Rover 27 so quick. We installed all 15 of them that night; I do not know why I waited so long to change. What a difference, these should be a standard item on every Rover. During Mike's development he had put a few on the machine for us to try out; they seemed to work great but were randomly placed through out the work surface area. Now that we have changed them all out, WOW! Great Job! Thanks again,

—Tim Shea

We have used the BVC pods several times and they perform better than expected, absolutely no leaks, no movement and rock solid holding power. I will never make another cup again.

—Jeff Foreman

All of our patent pending cups at Better Vacuum Cups, Inc. are tested on local customers routers prior to being released to the public. We spend many hours actually running the cups on the routers to develop a product. When looking into replacing cups for your cnc, trust only the best, Better Vacuum Cups, Inc.
